

# Earth Day

By Jack [REDACTED]

I think earth day is about cleaning up the environment so you do stuff like cleaning up rivers and creeks also ditches by the road that have trash in them. I believe that factories use too many fossil fuels. A good way to start is by starting small and doing things like donating to a climate change website, then I think you could get a electric lawn mower or a electric car like a tesla or some other car. In my opinion people think more than they do and people complain about climate change though their probably polluting in that very moment in some way like leaving their car to warm up for 30 minutes outside when it is to cold outside in my opinion you let it warm up for five minutes or not at all, really not at all.

A story from my life is that every day on earth day we collect more than five trash bags worth of garbage filled with all sorts of stuff, once we found a tire! But a thing people don't talk about enough is uranium power plants and when they fail and the nuclear waste they produce take a insanely long time to decompose. A horrible thing for the environment is the willow project. This is from the carnegie endowment for International peace. Here is a quote to help my reasoning: "if the willow project produces as much oil over thirty years as expected consumption of that oil would release 277 million metric tons of co2 into the atmosphere". which is insanely bad. A very big issue is driving cars, because billions of people drive gas powered cars, but at least cars have started to be less bad for the environment since they were made and a way parents help the planet is that they bought a hybrid car and my soon to be step dad got an electric car and a honorable mention should go team trees and team seas every dollar you donate to team seas they take a pound of trash out of the sea.

In my opinion you should do what is in these paragraphs about earth day. These paragraphs are in my opinion what earth day is about and the bad stuff that is happening to earth.
