**Subject:** VITRAKVI Oral Solution Packaging Change

Dear Trading Partner,

Bayer would like to inform you about the new 100 mL oral solution packaging for VITRAKVI® (larotrectinib). As the current 100 mL packaging will be phased out, the new 100 mL oral solution packaging now contains 2 bottles of 50 mL at the same concentration of 20 mg/mL. The new VITRAKVI oral solution formulation now incorporates a strawberry flavor. This new formulation also enables Bayer to further strengthen the reliability of product supply for the VITRAKVI oral solution. You can find the following support documents attached to this email:

- Healthcare Distribution Alliance (HDA) Sheet
- Safety Data Sheet (SDS)
- Product Label
- Package Insert

VITRAKVI® (larotrectinib) 100 mL Oral Solution Packaging Size Change	
CURRENT Packaging	NEW Packaging
<u>100 mL oral solution</u> NDC: 50419-0392-01 Packaging Size: 1 bottle of 100 mL WAC: [\$16,501.00]  Current packaging will be discontinued once supply has been diminished, estimated April 2023	<u>100 mL oral solution</u> NDC: 50419-0393-03 Packaging Size: 2 bottles of 50 mL WAC: [\$16,501.00]  Anticipated Availability: April 2023

### Summary

Bayer Customer Service will work closely with Purchasing Agents during this transition and advise when to begin ordering the new 100 mL oral solution NDC. Should a purchase order be placed using the current 100 mL oral solution NDC, and there is insufficient inventory to support, Bayer Customer Service will advise the customer to update or submit a new purchase order with the new 100 mL oral solution NDC. Bayer will not ship the new 100 mL bottles until Bayer's inventory of the current 100 mL bottle is depleted. Suppliers with current 100 mL bottles (NDC 50419-0392-01) should continue to utilize available products.

Please manage your inventory accordingly, as the current return goods policy remains in place. Safety data, product storage, handling and stability remain unchanged for 100 mL bottles while updated guidance is provided for 50 mL bottles. Unused 100 mL oral solution bottles have a shelf life of 90 days after a bottle is opened, and unused 50 mL oral solution bottles have a shelf life of 31 days.

If you have any questions, or if you require any further information, please contact Bayer at 1-888-842-2937.

Sincerely,

Spencer Miller
