

Earth Day Essay
Leland and Gray

What We Waste

The Three W's
Callen [REDACTED]

Have you ever thought about how much trash and recycling you and the other people on Earth waste? We waste 2.12 billion pounds of trash in a year. There is a big trash island in the ocean that affects all of us and the sea animals that get stuck in the plastic that they can not see.

We need to cut down on our plastic use. We need to remember to do things like breakdown our waste like, cutting apart the plastic rings that we keep soda in. We should pick up trash when we are on a walk, hike, or swimming. That is why Earth Day and Green Up Days are so important.

We should use less plastic products and more reusable products. Plastic can hurt animals and our environment like when we burn plastic it goes into the air. I think we should reduce our plastic and instead we should use reusable items. I hope you agree that let's cut on plastic and go with reusable bags and water bottles.
