Student Name:Hunter Rutland Intermediate School

Grade 5

Teacher: Mrs. Harris

Earth Day

Protecting the Environment

I think there needs to be a law that there must be a tree on the sidewalk every 20 feet. I also think that hunting endangered species world wide because it could hurt the environment. Another law that I think should be created is there must be trees around factories to help stop pollution. The last law I think should happen is if you cut down a tree you must replant the same type of tree in that area. I also think that there should be more people out on the ocean to stop people from hunting sharks and endangered species. That's all my ideas on how to protect the environment.

What I Like About Vermont

What I like about Vermont is that there are amazing views. Vermont Has good air to breath. I also like that there's mountains so we don't get a lot of tornados. Vermont has a lot of creatures, like birds, deer, bees, ants, fish, that are beautiful, even some make beautiful sounds. I like when it's quiet outside then I can hear the owls. If you go outside when the sun is setting you will hear whos coming from the sky.

I Am Also Concerned About This

What I care about is that dental assistants and dentists should get covid shots first because they are a part of health care. Also the people

shouldn't tell them no because they work in <u>peoples mouths</u>. They are health care and doctors and other people got covid shots but not people who work in a dental office.

Earth Day

I think if we all do everything we can we can stop species from going extinct, global warming, and more. If we can change are hearts we can stop those things from happening. Have a happy Earth Day!
