

GREAT EARTH DEVASTATION.

BY HARPER
BFA FAIRFAX
5TH GRADE

Have you ever wondered how you are able to do what you love like swimming, outdoor recreation, like fishing? Well the earth is a big part of it. It gives the grass and the space. well It is starting to get polluted.

It is starting to get smaller in space and you can't go swimming in too many rivers like you could because you can get sick. From the bad sickness that trash does to us and to the earth. To start, pick up your trash, use a reusable water bottle if you see other people's trash then pick it up.

I know what it is like to drive all this way to a great big lake which is the best in the weather and then go straight back home because it is closed due to the bad gross water and a sickness warning, you can help with that and this is how....

Cleaning up your trash helps pick up others that may have forgotten or don't care about the amazing world. Pick up trash helps those rivers, ocean lakes, ponds. Who can't help themselves. Clean up after yourselves. Please and thank you.
