Earth Day Essay

This is my Earth day essay. The first thing I want to talk about is why I want the environment to be clean so I can hunt/fish. I am going to talk about hunting first. Hunting is good because it will help the population so there are not too many animals. Now it is for fishing. Fishing helps wildlife by making so there are not too many fish in ponds/lakes. A cool fun fact is that the biggest bass in VT is 10 pounds 4oz in lake Dunmore.

This is why you should clean the environment. There are many animals that have gone extinct or close. Like the bald eagle or the turkey. And it can affect the fish too. Like bass or perch. And it can affect plants so we need plants to feed animals and us. One cool thing that we do in Island Pond is we do green up day every year and it is in may. Green up day makes me happy because I know that earth is going to be cleaner.
