The Environment of Vermont

There are a lot of things I like about Vermont, One thing that I like about Vermont is the community. The community is rich in different cultures, languages, food, and more! I love all the animals that you see in the woods like deer, red cardinals, fishes like blue gills, ect. I also love the sunrises and sunsets, walking near Waterfront, looking at the horizon of the Green Mountains, or the Taconic Mountains and the Adirondack Mountains.

However, I am concerned about Vermont's changing environment due to the warmer weather. The University of Vermont announced in 2021 that since the beginning of the 19th century, the temperature has risen 2 °F, and the precipitation percentages have also risen 21% since the 19th century. Other world problems (such as pollution) will affect the future of Vermont, and our world. It's a great time to stop or use less of anything that has to do with changing the environment. This includes less cars producing carbon dioxide emissions

I'm a nature-lover. I give my attention to the climate, animals, well *anything*, that has to do with nature. Probably I'll take care or give more attention in the future. What I mostly care about in the environment is the ecosystem. I like the ecosystem because there is so much to learn about it. In the ecosystem, plants, animals and other abiotic factors all interact with each other. All of the biotic and abiotic also work together to create, well, a bubble of life.

It's just so interesting to talk about the ecosystem. It's fascinating how complex and mind blowing it is when you hear about it for the first time. Nature doesn't even need technology to create things that now exist, like us, humans. Humans are like the children of nature because everything is from nature, like the device that you're using to see this essay, everything like the chips, the screens and the power off button are made from material like gold or iron, all of that is made by nature. The clothes that you're using, made from nature - a book, made from nature. Everywhere you look in your home, most of the things you see are made from natural resources. Some products are inspired by nature, like velcro, velcro was inspired by a little seed called a burdock seed, invented by a swiss inventor, now one of the top products around.

The point of this essay is to make Vermont a greener state, my idea is that we should have our own national park somewhere near the capital of Vermont, and also to give more attention to the beautiful environment.
