Introduction:

I believe that it is important to take care of the Earth. The Earth is where we live and other animals live and if we don't take care of it everything could die!

Reason 1:

Air pollution is very bad for the environment. The first reason is air pollution is bad for people if we breathe too much in it can hurt our lungs. Air pollution is also bad for animals. If animals breathe it in they can get sick and they sometimes can't get away.

If you have a bike ride to places that are close to you it will help air pollution.

Reason 2:

Water pollution is also bad for the environment. The first reason is that if we pollute the water it will kill many animals. Water pollution is also bad for people. We wouldn't be able to drink, bathe and cook. If all the water gets polluted we wouldn't be able to do anything in water.

Reason 3:

Littering is very bad for the Earth. If you litter other people would think that it is okay to litter too. If a lot of people litter it could make a ton of trash everywhere. If you litter other people might have to move all the trash that's in their way and that would be gross.

Conclusion:

In conclusion we need to take better care of the environment. If we don't, the Earth could become a very bad place.
