The Earth's Fresh Air and Cool Animals

The Fresh and Polluted Air

What would happen with the air if everybody was driving gas powered vehicles? First, the air will be more polluted than it already is. Second, everyday people breathe Co2 and it makes them cough. It will affect grandparents and parents. They will start breathing it in then it will affect their lungs which might hurt them alot. If everyone started driving electric vehicles or not driving anywhere it will help the pollution.

We would breathe fresh air, not air with smoke in it. The air in the earth is fresh for now until everybody starts using factories that deposit smoke into the air. The land in Vermont is a very delightful place with all the mountains and insects. The mountains are really marvelous. Also if people stop polluting the air we will have a better life because Co2 is really bad for all humans, animals, and plants.

Endangered Animals

The Northern Brook Lamprey is an endangered species in vermont. the Boreal chorus frog is a endangered species in Vermont and here's a

picture of it isn't it cute i think it is The Spotted turtle is an endangered species they live in marshy meadows, bogs, swamps, ponds, ditches they were listed as threatened in Rutland the Timber rattlesnake is a endangered species in Vermont the Eastern small footed bat is a endangered species that lives in Vermont. Animals are really important in the ecosystem because of the food chain. The food chain is when smaller animals on the bottom of the food chain get eaten by the animals that are higher on the food chain and it keeps going on and on. Like when a small fish meets a bigger fish the bigger fish eats it.
