

Earth Day Essay
By Laney [REDACTED]

Horses are very important to me. Did you know everything horses eat can be traced back to the earth? If the earth is not clean, then their food is not clean and they might not be healthy. I am very interested in Earth Day because it is the day Senator Nelson created this amazing day. This is where people are inspired to pick up trash, recycle and help keep the air clean and do many more easy things to make a big difference in the world. If we did this more it would help keep horses, people and other animals healthy. I pick up trash, recycle and try to help keep the air clean for my horses.

Horses keep us healthy by letting us use their manure. When composted, we can use it as a natural fertilizer for our crops. Chemical fertilizers can run off into our water sources and make it so water is not drinkable. Plants and trees use carbon dioxide and convert it into clean air so we can breathe better. Having healthy trees and plants is good for everyone.

Boom, crash "HEADS UP"! That is a logger cutting down trees for a new arena. If you are going to make me a new arena and sadly you need to cut down trees, please plant some new maple trees right next to the arena. The reason I'm asking you to put some trees by the arena is because trees have photosynthesis, which is something in a tree that gives you oxygen and they give my horses shade when they're hot. That makes it so when I'm riding I don't have to ride in polluted air. If I couldn't gallop around the field because the air was polluted I would have turned into Eeyore from Winnie The Pooh. That's why we need to plant more trees so we can have clean air to ride in. You shouldn't cut down more than you will use because that will be a waste and we need trees to clean the air.

Humans really hurt my horses when they drive cars unnecessarily, pollute the air, and litter. If the world is too hot the climate changes. When there is no rain and it is super hot we may experience drought. If it is too dry to grow, the horses' hay and food will be affected. We need to be more careful and make sure there's no climate change. You can turn off the light if you're not in the room, only have one electronic device on at a time and you can turn off the water while brushing your teeth. All of those are simple things you can do to make a difference in the world. If we do all of that, then we can make sure that horses live a happy and healthy life.

If everybody did simple things for the world every day the world would be a better place. It doesn't take much effort to recycle, use less, reuse, plant trees, and use less fossil fuel. As you can see, the world and horses would thank you for it.
