

## Littering

Maline [REDACTED]

3-1-2022

I think littering is bad. It's bad for the ocean. Also the litter can travel around the world. We can use plastic to make things.

One reason littering is bad is when you litter it goes in the ocean. See animals eat the garbage and they die. See animals can be stuck in plastic. Plastic chemicals can kill a coral reef.

Trash can travel around the world. Some animals in the world will think that's food. If the trash flies to different kinds of countries, they still have the problem of the trash. That's not fair.

Instead of littering we can make stuff with Plastic. I read a book about this woman who used this plastic to create a zip bag. In Nepal we keep plastic so that's how we can give plastic to another person. That's how they can carry heavy stuff.

Now you have learned plastic can hurt the animals and go around the world but you can know how to fix it By making stuff with plastic. Take care of your plastic so that's how you can't make the world go all polluted so that's how you can take her of Your World.
