How Can You Help the Earth?

Did you know that the Earth is struggling? We are hurting it on land, sea and air. One way that you can help is to clean the ocean because people are throwing things in the ocean and that's not good for the planet. Because if that happens the Earth will die. You can even plant trees and flowers because that will help people and life because trees give us oxygen. The most important thing for living creatures is to have food, water and a home. If we destroy Earth we have no more home.

The Earth is an important planet because there are about 7.9 billion people and about 1.6 million species of life. If people keep burning clothes and other things our air will become unhealthy. If people throw things in the ocean, the fish and other sea creatures will die. If people join to help then there will be no more unhealthy food, air, ocean and more. That's good for people and other life on Earth. If people take care of the Earth it will be beautiful and not disgusting. Some ways to help the Earth is not waste water, food, and electricity and resources. Kids can do many things to help the Earth. One thing is to help others and the people that are struggling. Second reason is to try to take care of things and not waste food.

Why should people help the Earth? People should help the Earth because the Earth is what makes us live and be happy. People should treat the Earth nicely because if we don't have the Earth then we are not alive or no more humans. That's why you should help the Earth and make the Earth clean as new. Kids are helping the Earth with their cleaning and planting and taking care of things. The Earth is the only planet that has living things. We are all lucky to have the Earth.
