

Plants

Their part in the environment

Plant Introduction

Plants, arguably the most important part of the environment, cleanse our air, they give us food, medicine, fiber, and they make the outdoors beautiful. We could do nothing without plants, Nothing. Plants are the reason we are alive, a big part of that is they give us food. Before you start saying, "Well, we could live off meat." Yes, we could live off meat but to get the meat we need plants, the plants feed animals that we are going to eat, so with that out of the way. I would like to say again, plants are the reason we are all still alive.

Plants and wildlife

Plants and wildlife, what a great match, maybe better than us and plants. Plants provide wildlife with lots of things, for example, food and shelter. Horses use grass for food, salamanders use dead logs for homes and some birds use plants for nests. They all get something out of plants and it always makes a big difference in their lives, just like us they get their precious lives from plants, and they don't make bug changes to them like we do.

Plants and us

Plants and us, some take care of them and they take care of all of us. It's fair. We get so many things from plants, that soft cotton shirt you're wearing, PLANT, that steak you had for dinner, you know what they ate? PLANTS. It all goes back to plants somehow. That orange juice you had with your breakfast, PLANT, plant, plant, plant. It's always plants. Plants and us, I take it back, we are a better match than plants and wildlife.

Plants as food

Plants are lots of things to us, one example being food. We eat plants such as mushrooms, tomatoes, some flowers, cucumbers, lemons, limes, that juicy apple, all that good stuff. There are very special people who grow and harvest these plants for us, gardeners, thanks gardeners. Some animals are gardeners to, well

kinda, our friends the bees pollinate, butterflies, (I think) and even more bees.

Plants and Tools

As I just said, plants give us food, yeah, well now they give us tools! Plants make lots of tools, like the sticks people had at the end of their spears, that came from a tree or a big bush, both plants. There are also prickly plants that I can use as tools, like thorns, to cut a plant off its stock, to attempt to scare my sister, lots of other things. I do think that people use other kinds of plants for other things, but I don't wanna get anything wrong so I'll leave that to the experts.

Plants and Medicine

Plants, they do so much for us. Medicine, valerian, (I had no idea what this was at first) it is meant to help with anxiety. Then there's the all famous aloe vera, which is most commonly used to treat sunburns, and you can eat the leaves. I'm not sure if they would taste good though, it should have a bitter, acidic sort of taste, so I wouldn't eat it.

Plants in Classrooms

We have plants in our classroom, our teacher loves them, but being pretty is not the only reason they are there. Indoor plants have been proven to lower your anxiety, boost your mood, limit headaches by improving air quality and more.

Plants Closing

Plants, again and again, plants show up in our daily lives, you see them while you're walking down the road, sometimes in your house, in the woods, everywhere you go there will be plants, even in the concrete jungle of New York City, there will be plants. It's inevitable.
