

## Why We Should Take Care of Earth

By Sujal

2/17/22

I believe we need to take care of the earth. Every living organism will die if we do not.

One reason is people will starve to death if we do not take care of the Earth. The animal meat will be toxic to eat. The plants will also be toxic to eat. If we can take care of the Earth and not let pollution take over, the Earth will stay beautiful.

Another reason is all animals will die. They don't have meat or plants. Their food would be toxic and die in a couple of days. Pollution makes them toxic. We should reuse anything we can.

A final reason is that storms will be more dangerous if we don't take care of Earth. A lot of storms have water. If the water is toxic, there is a chance it will get into your eyes and you can't see. It will be painful. You can slip and fall on your head and could pass out.

In conclusion, we need to take care of Earth. Everything will die of starvation because of pollution.
