What are the Top States with the Worst Air Quality?

I like Vermont, because I like the clean air and the clean water. In this essay I will tell you about the clean air and water. I would like to keep it clean and healthy but with all the pollution going on, that's a big task.

Vermont's air isn't like the air in Mississippi where I'm from. Here the air quality is good, like some of the best and I think we should keep it that way. I think that to keep the air here clean like it is now, we need to drive less, maybe walk around town more instead of driving to our local grocery store that's a five minute walk from our homes. Or maybe just walk around and pick up trash.

Another reason I like Vermont so much is that there are so many rivers and swimming holes here. The Waitsfield Bridge for example, or Warren Falls.

like do we want clean

or dirty water.

Both are really fun places to go swimming with family. But if we're not careful, these places could get polluted and not be safe to swim anymore. Like you'll be swimming and suddenly you'll feel a sharp stinging pain in your leg. You'll reach down and pull up a broken can that has just cut your leg. For that not to happen. Maybe someday just walk the banks and pick up trash. Maybe ask friends or family to help you out.

Also not driving as much would help fight climate change. And we should fight climate change, because if you like the skiing, snowboarding, sledding, etc you should care about climate change not happening because then we couldn't do all of the above, because the snow would be gone and there would be no winter sports. Even if you don't like winter sports, you should still care about climate change because that also means air pollution, like smog (smoke fog) that kills millions of people. We need to stop the air pollution because smog is dangerous for humans as well as animals. More than car crashes and shark attacks. Did you know, more people have died from smog deaths this year than shark attacks and car crashes combined?

My point being, this is such a beautiful place, we should help to keep it clean and healthy like it is now. So that future generations can have the same experience of a clean environment that we do now. They can swim and walk around without having to worry about smog or dangerous stuff in the water.
