Vermont is a very beautiful state overall. It is home to many plants and animals. It is also home to many people. Vermont has breathtaking mountains, large pretty lakes and a lot more beautiful natural features. Vermont's name comes from the words Green Mountain. *Vert* meaning green in french, and *mont* meaning mountain in French. This shows that Vermont is a state green with plants and a state with a lot of mountains.

Unfortunately, quite a few people that visit and/ or live in Vermont tend to litter in the areas of wilderness in Vermont. Littering is able to ruin any environment completely. It can ruin the environment by things like restricting growth in plants because many smaller plants are very uncapable to grow with litter all over and around it. Littering affects the animals that live in the environment by affecting the overall lifespan of that animal, mostly depending on what type of pollution is affecting the animal. Practically all things that live in an environment get affected negatively by pollution in one way or another.

Vermont has a beautiful environment that needs to be kept clean, instead of litter being put almost everywhere. To try and combat the problem of plastic litter in Vermont's environment, Vermont has a holiday-like thing called "*Green Up Day*". Green up day is a holiday where people that live in Vermont pick up litter from places like the side of the road. Green up day is celebrated on the 7th of may in 2022. The date of it is determined by the first Saturday in the month of May.

Vermont is a state mostly filled with a lot of kinds of natural beauty. Vermont has many different animals, plants, and physical landscape features. Vermont has many different features that define it in several ways. Lots of pollution could do long lasting damage to an environment like vermonts. Vermont has lots and lots of beautiful things within its state, but pollution and littering may destroy Vermont's natural beauty one day. That's why Vermont does some things that try and clear up this problem of littering. There is lots and lots of litter on roadsides because most people throw things like bottles (some glass), plastics and a lot of other random pollutants and trash that can affect and damage the environment in a negative way.

There are lots of different pollutants types, air pollution, land pollution, and water pollution. All of these types of pollution affect Vermont, some more than others. The most common pollution in Vermont is air pollution. Air pollution is co2 and other things like it getting released into the air and polluting it. Land pollution is things like plastics, glass, and a bunch of other things that are not decomposable materials, or materials that take a long time to decompose littering the land. Ocean

pollution is things like plastic, glass, and a bunch of other things that are decomposable in a body of water, like a lake.

Vermont is a very beautiful state overall. It is home to lots of different types of animals and plants. It is an area filled with beautiful mountains and lakes.

Vermont is overall a very amazing and pretty state. To end this, Vermont will hopefully stay as beautiful as it is currently. Vermont is beautiful.
